sodium chloride 0.9 % bolus 1,000 mL (0 mLs Intravenous Bag Stopped Time 7/2/16 2355)
ondansetron (ZOFTRAN) 4 mg/2 mL injection 4 mg (4 mg IV Push Given 7/2/16 2155)
ketorolac (TORADOL) injection 30 mg (30 mg IV Push Given 7/2/16 2156)
morphine injection 4 mg (4 mg IV Push Given 7/2/16 2157)

Initial Treatment: The patient will be given IV fluids, Zofran 4 mg IV push, Toradol 30 mg IV push and morphine 4 mg IV push. Order Ultrasound and lab series. The patient is agreeable to treatment at this time and does not have any further questions or concerns.

Visit Summary: The patient presented to the ED with a chief complaint of abdominal pain. Physical exam as described. Initial plan as described above. Labs were reviewed. Urine shows hematuria. US shows retained products of conception. I re-evaluated the patient and discussed lab and US results. Pt is stable and is no longer actively vomiting. The patient's symptoms and work-up results were consistent with an incomplete miscarriage and pelvic pain. The patient was given a prescription for Norco for pain control and Zofran for nausea. The patient was instructed to follow up with Dr Yankama or Planned Parenthood in 3 days after the holiday weekend. Pt was agreeable to entire treatment plan and was discharged in a stable condition.

Vitals Review / AOK Attending Approve DC

Vitals reviewed by physician. The patient's vital signs have been reviewed before disposition.
