

# Archive of Documented Maternal Patient Deaths from Abortion

By Operation Rescue  
Updated 2/13/24

This is a permanent historic archive of reports produced by Operation Rescue related to documented cases of abortion-related maternal deaths. In many cases, Operation Rescue was the primary source that uncovered the abortion patient death, researched and reported on it, and filed complaints against those abortionists and facilities responsible.

The actual number of maternal deaths from abortion are unknown, due to inadequate reporting and the fact that the Abortion Cartel goes to great lengths to cover them up so they can pretend to the public that their grisly business is “safe and legal.” We know better.

The Abortion Cartel wants us to forget these women ever existed, or that their deaths are acceptable losses. We reject both those notions. May we never forget the toll in human tragedy abortion inflicts on women, their babies, and society in general, and may that memory urge us on in our work to protect human lives until abortion has ended for good.

The incidents with informative hyperlinks (in blue text) are listed from most to least recent by year of death.

## **Alyona Dixon – 2022**

Case of 24-year-old woman died of “complications from septic abortion” six days after a Las Vegas Planned Parenthood administered chemical abortion drugs on September 22, 2022, and told her to go to an ER or contact a gynecologist if she experienced complications. Her in utero child’s estimated gestational age was 8 weeks 5 days, according to the autopsy report. She experienced severe dehydration, acute renal failure, leukocytosis, sepsis, lactic acidosis, hypokalemia, sinus tachycardia, metabolic acidoses, pulseless electrical activity, and respiratory failure. Her heart rate elevated to 150, doctors worked to intubate and sedate her as she struggled to breath. She vomited during the process and her heart stopped. Attempts to resuscitate her failed, and she was declared dead at 5:32 a.m. on Sept. 28, 2022.
